The “IET Career Congress” is a half-day event on Professional Registration and career planning, especially for students and young engineers. There will be two parallel sessions to cater for the different needs of students/fresh graduates who are at the start of their career and engineers who are ready for Professional Registration.

The first session focuses on Professional Registration and will detail the requirements, procedures and benefits of obtaining professional registration through the IET. Participants will gain valuable advice for preparing themselves for professional registration.

The second session focuses on career planning and introduction about the engineering profession. This session will include a talk about career planning and presentations by guests from several companies which highlight the works and roles of engineers in their companies. This session aims at assisting students and fresh graduates to plan for their career, learn about the work of engineers and equip themselves for professional development.
